EXPERIENCE

DevSecOps Engineer

Sep 2025 – Present

CuraJoy

- Hardened platform security by finding and fixing critical vulnerabilities, adding role-based access control and encryption, and setting up monitoring and alerting, which kept production stable and secure as the product scaled.
- Built security into the CI/CD pipeline with automated SAST, dependency, and secret-scanning gates, cutting post-release security defects by 40% and removing manual release steps so the team ships safer code faster.
- Ran incident response on production alerts: triaged events, traced root cause, and shipped fixes quickly to limit exposure and shorten time to recovery.

Cyber Security Intern

Jun 2022 – Aug 2022

State Cyber Crime Cell, CID Crime and Railways

- Supported 23+ active investigations across incident response, digital forensics, and security event analysis; collected and analyzed evidence to rebuild attack timelines and support legal documentation. Helped design a secure central database with access controls and data confidentiality, making evidence easy to search and link while protecting sensitive data.

Cloud Developer Intern

Feb 2021 – Jan 2022

Seatizen, Start-up incubated at PDPU IIC

- Built and deployed object-detection pipelines from edge GPU devices to Google Cloud, improving inference accuracy by 15%, and secured the deployment with IAM roles, locked-down Firestore rules, and least-privilege service accounts to protect image data.

PROJECTS

ProofGate | *Python, FastAPI, GitHub Actions, Docker, Semgrep, Trivy, Prowler, Claude API*

- Built a CI/CD security gate that pairs an AI reviewer for authorization and logic bugs scanners miss (IDOR, refund abuse) with SAST, dependency, container, and cloud scans. Most AI review only advises because it hallucinates, so ProofGate proves each finding against the real code before blocking a merge and measures its own false-positive cut.

Detection Engineering Lab | *Splunk, Sigma, MITRE ATT&CK, Atomic Red Team, Suricata/Zeek*

- Built a SOC lab that ships endpoint, network, and cloud logs into Splunk and replays real attacker techniques mapped to MITRE ATT&CK with Atomic Red Team. A Sigma rule counts as coverage only after it fires on a live attack and stays quiet on normal activity, so the coverage map shows what the lab actually catches, not what its rule pack claims.

Security Audit & Compliance Review | *PCI DSS, GDPR, SOC 2, NIST*

- Ran a full security audit of a web platform across technical, administrative, and physical controls (least privilege, encryption, firewall and IDS, password and recovery policy). Mapped each gap to PCI DSS, GDPR, SOC 2, and NIST, then delivered a remediation plan that fixes the highest-risk findings first.

TECHNICAL SKILLS

- **Security:** Threat Modeling, MITRE ATT&CK, Incident Response, Vulnerability Assessment, OWASP
- **Tools & Compliance:** Nmap, Wireshark, Burp Suite, Splunk, Prowler, Maltego, NIST, PCI DSS, GDPR, SOC 2
- **Cloud & DevOps:** AWS, Azure, GCP, Docker, Kubernetes, CI/CD, Jenkins, Ansible, Git
- **Programming:** Python, C/C++, Java, C#, Bash/Shell, SQL, JavaScript/TypeScript, PowerShell

CERTIFICATION

- CompTIA Security+ (SY0-701), 2026: threat management, incident response, cryptography, and risk.

EDUCATION

University of Maryland

Aug 2023 – May 2025

M.Eng, Cybersecurity, GPA 3.93/4.00

College Park, Maryland, USA

- Received the 2024 ISC2 Graduate Scholarship for academic excellence and dedication to cybersecurity studies.

Pandit Deendayal Energy University

Aug 2019 – May 2023

B.Tech, Computer Engineering, GPA 9.72/10.00

Gandhinagar, Gujarat, India

- **Coursework:** Information Security, Digital Forensics, Blockchain, Distributed Systems, Machine Learning

PUBLICATIONS

- Yogi M., *"IoT Forensics System based on Blockchain,"* 2023 10th International Conference on Computing for Sustainable Global Development (INDIACom), **IEEE, New Delhi, India**, 2023, pp. 490–495.
