

Yogi Makadiya

yogimakadiya3@gmail.com | Redmond, WA | linkedin.com/in/yogibm | yogimy03.github.io

Security-first software engineer who builds and operates production cloud services end to end, from REST APIs and CI/CD to monitoring, incident response, and LLM-powered features. M.Eng in Cybersecurity, University of Maryland, GPA 3.93.

EXPERIENCE

Software Engineer

Sep 2025 – Present

Curajoy

- Shipped 10+ full-stack features across React, REST APIs, and databases at an AI wellness startup, including an LLM-powered coaching chat that became the core product experience and grew weekly active users by 30% in two months.
- Cut production incidents by 40% by migrating cloud infrastructure to AWS, adding monitoring and alerting across every service, and running incident response from triage through root-cause fixes so the same failures did not come back.
- Built data pipelines that ingest user activity from multiple sources into one reporting database, and automated CI/CD, adding test and security gates that cut deployment errors and doubled release frequency.

Software Engineer Intern

Jan 2023 – Jun 2023

Double Slash Internet Pvt Ltd

- Integrated automated test gates and code quality checks into CI/CD pipelines for 4+ production backend services, improving deployment speed by 30% and reducing post-release defects by 40% while keeping releases frequent and safe.
- Built Python/Flask dashboards for real-time monitoring of assets and system metrics, processing live operational data from multiple sources and implementing role-based access control to keep sensitive business data protected.

Cloud Developer Intern

Feb 2021 – Jan 2022

Seatizen, Start-up incubated at PDPU IIC

- Trained and tuned computer vision models for object detection on resource-constrained embedded devices, improving inference accuracy by 15% through model optimization, then deployed the pipeline to Google Cloud with Firestore for scalable, low-latency processing and led hardware selection across multiple edge GPU platforms, balancing cost and performance.

PROJECTS

LLM-Powered Code Review Agent | *Python, FastAPI, Anthropic API, Docker, GitHub Actions*

- Built an AI agent that reviews GitHub pull requests and posts structured correctness and security feedback as inline review comments, cutting manual review time by 60%. Integrated the GitHub REST API to place comments at exact line positions, and designed diff chunking so large pull requests fit within LLM context limits without losing review quality.

ResidentEase Apartment Management System | *React, Node.js, PostgreSQL, JWT*

- Developed a secure web app for apartment communities covering rent payments, maintenance requests, and event scheduling with React, Node.js, and PostgreSQL. Protected resident data with JWT authentication, encryption, and role-based access control, and ran threat modeling and secure code reviews before each release to keep the system reliable.

Classification on Juvenile Delinquency | *Python, Scikit-learn, Pandas, Matplotlib*

- Applied classification models to demographic and socioeconomic datasets, reaching 96% accuracy in identifying high-risk areas for juvenile delinquency. Cleaned and analyzed large datasets to surface trends, then built visual reports and summaries that turned complex data into clear, actionable insights for policy stakeholders and decision makers.

TECHNICAL SKILLS

- Programming & Scripting:** Python, Java, TypeScript, C#, C++, JavaScript, SQL, Shell, NoSQL, HTML/CSS
- Frameworks & Platforms:** React, Node.js, ASP.NET, FastAPI, Django, PostgreSQL, Firestore, Linux/UNIX
- Cloud & DevOps:** Azure, AWS, Google Cloud, Docker, Kubernetes, GitHub Actions, Jenkins, Ansible, Git
- AI & ML:** LLM APIs, NLP, prompt engineering, RAG pipelines, object detection, Scikit-learn, Pandas

EDUCATION

University of Maryland

Aug 2023 – May 2025

M.Eng, Cybersecurity, GPA 3.93/4.00

College Park, Maryland, USA

- Received the 2024 ISC2 Graduate Scholarship, awarded for academic excellence in the graduate program.

Pandit Deendayal Energy University

Aug 2019 – May 2023

B.Tech, Computer Engineering, GPA 9.72/10.00

Gandhinagar, Gujarat, India

- Coursework:** Distributed Systems, Cloud Infrastructure, Machine Learning Applications, Information Security

PUBLICATIONS

- Yogi M., *"IoT Forensics System based on Blockchain,"* 2023 10th International Conference on Computing for Sustainable Global Development (INDIACom), **IEEE, New Delhi, India**, 2023, pp. 490–495.
